

## COMPLEMENTARY SILICON POWER TRANSISTORS

The MJ15003 and MJ15004 are power base power transistors designed for high power audio, disk head positioners, linear amplifiers, switching regulators, and other linear applications.

### FEATURES:

- \* High Power Dissipation  
 $P_D = 250 \text{ W } (T_C = 25^\circ\text{C})$
- \* High DC Current Gain and Low Saturation Voltage  
 $hFE = 25(\text{Min}) @ I_C = 5.0 \text{ A}, V_{CE} = 2.0 \text{ V}$
- \* For Low Distortion Complementary Designs

FIG-2 FORWARD BIAS SAFE OPERATING AREA

There are two limitation on the power handling ability of a transistor: average junction temperature and second breakdown safe operating area curves indicate  $I_C$ - $V_{CE}$  limits of the transistor that must be observed for reliable operation i.e., the transistor must not be subjected to greater dissipation than curves indicate.

The data of FIG-2 is base on  $T_{J(pk)}=200^\circ\text{C}$ ;  $T_C$  is variable depending on conditions. At high case temperatures, thermal limitation will reduce the power that can be handled to values less than the limitations imposed by second breakdown.
