

Video Scan Converter

Description

The CXD2428Q is an IC which generates control signals and performs line interpolation calculations for field memory (CXK1206AM/ATM) in order to perform video signal scanning line conversion. In addition, this IC performs the aspect conversion of the ZOOM mode and WIDE-ZOOM mode in order to support wide screens.

100 pin QFP (Plastic)

Features

- Video signal (NTSC/PAL) scanning line conversion function
- ZOOM function
(Function to cut top and bottom areas of 4:3 image and expand it to 16:9)
- WIDE-ZOOM function
(Function to vertically compress 4:3 image and expand it to 16:9)
- Operating frequency: 28.6MHz (typ.)

Absolute Maximum Ratings (Ta = 25°C)

• Supply voltage	V _{DD}	V _{SS} – 0.5 to +7.0	V
• Input voltage	V _I	V _{SS} – 0.5 to V _{DD} +0.5	V
• Output voltage	V _O	V _{SS} – 0.5 to V _{DD} +0.5	V
• Operating temperature	T _{opr}	–20 to +75	°C
• Storage temperature	T _{stg}	–55 to +150	°C

Operating Conditions

Supply voltage	V _{DD}	4.5 to 5.5	V
----------------	-----------------	------------	---

Applications

Liquid crystal projectors, etc.

Structure

Silicon gate CMOS IC

Setup and hold time of CSD0 to CSD7, CFD0 to CFD7, YSD0 to YSD7 and YFD0 to YFD7 in relation to RDCK	9ns	3ns
Setup and hold time of HIN in relation to CKI	3ns	3ns
Setup and hold time of VIN in relation to CKI	0ns	20ns
Setup and hold time of YCK in relation to CKI	20ns	2ns

Description of Operation

1. CXD2428Q Control System

The operation timing of this IC is controlled by serial data.

An 8-bit address and 8-bit data are sequentially transferred from the falling edge of SCTL, and each control data is taken in at the rising edge of SCLK up to the rising edge of SCTL.

Serial transfer timing

2. Control Mode

The following timing and modes are changed by control data:

Variable	Address	Function
H SHIFT	00H	Horizontal write start timing
V SHIFT	10H	Vertical write start timing
H PHASE	20H	Horizontal readout start timing
V PHASE	30H	Vertical readout start timing
H SZ RD	40H	Number of readout line dots (0 to 7 bits)
	50H	Number of readout line dots (8 to 10 bits)
H SZ WR	41H	Number of write line dots (0 to 7 bits)
	51H	Number of write line dots (8 to 10 bits)
LN DAT0 to 7	60 to 67H	Conversion mode address
MD DAT0 to 7	70 to 77H	Conversion mode data
TOP BLK	A0H	Vertical blanking rise timing
BTM BLK	B0H	Vertical blanking fall timing
LFT BLK	C0H	Horizontal blanking rise timing
RGT BLK	D0H	Horizontal blanking fall timing
IODAT	80H	I/O port output data* ¹
IOSL	E0H	OUT port select* ²
TEST	90H	* ³

*¹ Transfer xxxx.1xxx (binary) for PAL (4:3 display) and xxxx.0xxx (binary) for the other systems.

*² Transfer 00 (hexadecimal).

*³ Transfer 00 (hexadecimal).

3. Scanning Line Conversion Function

LN DAT (address 6x) and MD DAT (address 7x) are data which indicate scanning line conversion coefficients.

There are the following 8 conversion coefficients:

$$1.67/1.75/2.0/2.22/2.33/2.67/2.8 = K$$

$$K = \frac{\text{number of scanning lines of output signal}}{\text{number of scanning lines of input signal}}$$

The conversion coefficient equals the ratio of one scanning line to scan lines generated by interpolation. The coefficient can be changed on the screen.

In the WIDE-ZOOM mode, compression and expansion on the screen can be changed by combining these 8 coefficients as desired.

Compression and expansion are carried out by setting the coefficient and the number of switching lines.

The upper 6 MD DAT bits (bits 3 to 8) provide coefficient data.

The lower 2 MD DAT bits (bits 1 and 2) and 8 LN DAT bits provide line number data.

The coefficients and corresponding MD DAT are shown below.

Coefficient	MD DAT	
	MSB	LSB
1.67	000100xx	
1.75	001000xx	
2.0	000001xx	
	000000xx *	
2.1	010000xx	
2.22	011100xx	
2.33	101000xx	
2.67	110000xx	
2.8	110110xx	

* The interpolation coefficient 2.0 has two modes which are determined by the value of bit 3.

When bit 3 is 1, an interpolation line is generated by outputting the same signal as that of the preceding line. This mode realizes images with a higher vertical resolution.

When bit 3 is 0, an interpolation line is output by averaging signals of the preceding and following lines. This mode realizes images with smoother diagonal lines.

4. DA Converter Clock

RYCK and BYCK, which are YCK halved and phase inverted, are output as D/A converter clocks.

5. Output Control

A black signal is output when BLNK is high.

Mode Setting and Operation

1. Horizontal Write

CKI is input after phase comparison with HSYNC input.

PLL frequency division value is set by H SZ WR (standard 38C (hexadecimal)), and HRET is output.

Write start timing is set by H SHIFT.

An ADCK pulse, which is CKI halved, is output.

The enable pulses RYOE and BYOE for R-Y and B-Y A/D converter are output.

2. Horizontal Readout

In this IC, the readout and write clocks are asynchronous.

The readout 1H sample coefficient is set by H SZ RD.

An HOUT pulse with a pulse width of 68ck is output from horizontal readout reference pulse HRSP (internal pulse).

Readout start timing is set by H PHASE.

The HBLK pulse set by LFT BLK and RGT BLK is output. However, this pulse does not stop readout, so it has no relation to the actual blanking interval.

3. Vertical Write

Write start timing is set by V SHIFT.

The CXK1206AM/ATM write control pulses VCR0, HCR0 and WEN0 are output.

4. Vertical Readout

The VBLK pulse set by TOP BLK and BTM BLK is output. However, this pulse does not stop readout, so it has no relation to the actual blanking interval.

Readout start timing is set by V PHASE.

The CXK1206AM/ATM readout control pulses VCR1, HCR1, REN1, INC1 and INC2 are output.

The VSP pulse (internal pulse) corresponding to V SHIFT is the vertical readout reference pulse.

A VOUT pulse with a pulse width of $6H^*$ (* indicates double scan H) is output.

The schematic diagram illustrates the internal structure and pin connections of the CXD2428Q IC. The IC is a complex integrated circuit with multiple pins for power, ground, and signal. The diagram shows the following components and connections:

- Power and Ground:** The IC is connected to a +5V supply and ground. Power pins include VDD, VDD1, VDD2, VDD3, VDD4, VDD5, VDD6, VDD7, VDD8, VDD9, VDD10, VDD11, VDD12, VDD13, VDD14, VDD15, VDD16, VDD17, VDD18, VDD19, VDD20, VDD21, VDD22, VDD23, VDD24, VDD25, VDD26, VDD27, VDD28, VDD29, VDD30, VDD31, VDD32, VDD33, VDD34, VDD35, VDD36, VDD37, VDD38, VDD39, VDD40, VDD41, VDD42, VDD43, VDD44, VDD45, VDD46, VDD47, VDD48, VDD49, VDD50, VDD51, VDD52, VDD53, VDD54, VDD55, VDD56, VDD57, VDD58, VDD59, VDD60, VDD61, VDD62, VDD63, VDD64, VDD65, VDD66, VDD67, VDD68, VDD69, VDD70, VDD71, VDD72, VDD73, VDD74, VDD75, VDD76, VDD77, VDD78, VDD79, VDD80, VDD81, VDD82, VDD83, VDD84, VDD85, VDD86, VDD87, VDD88, VDD89, VDD90, VDD91, VDD92, VDD93, VDD94, VDD95, VDD96, VDD97, VDD98, VDD99, VDD100. Ground pins include GND, GND1, GND2, GND3, GND4, GND5, GND6, GND7, GND8, GND9, GND10, GND11, GND12, GND13, GND14, GND15, GND16, GND17, GND18, GND19, GND20, GND21, GND22, GND23, GND24, GND25, GND26, GND27, GND28, GND29, GND30, GND31, GND32, GND33, GND34, GND35, GND36, GND37, GND38, GND39, GND40, GND41, GND42, GND43, GND44, GND45, GND46, GND47, GND48, GND49, GND50, GND51, GND52, GND53, GND54, GND55, GND56, GND57, GND58, GND59, GND60, GND61, GND62, GND63, GND64, GND65, GND66, GND67, GND68, GND69, GND70, GND71, GND72, GND73, GND74, GND75, GND76, GND77, GND78, GND79, GND80, GND81, GND82, GND83, GND84, GND85, GND86, GND87, GND88, GND89, GND90, GND91, GND92, GND93, GND94, GND95, GND96, GND97, GND98, GND99, GND100.
- Signal Pins:** The IC has various signal pins for video, audio, and control signals. These include YAD, YDA, YAD1, YDA1, YAD2, YDA2, YAD3, YDA3, YAD4, YDA4, YAD5, YDA5, YAD6, YDA6, YAD7, YDA7, YAD8, YDA8, YAD9, YDA9, YAD10, YDA10, YAD11, YDA11, YAD12, YDA12, YAD13, YDA13, YAD14, YDA14, YAD15, YDA15, YAD16, YDA16, YAD17, YDA17, YAD18, YDA18, YAD19, YDA19, YAD20, YDA20, YAD21, YDA21, YAD22, YDA22, YAD23, YDA23, YAD24, YDA24, YAD25, YDA25, YAD26, YDA26, YAD27, YDA27, YAD28, YDA28, YAD29, YDA29, YAD30, YDA30, YAD31, YDA31, YAD32, YDA32, YAD33, YDA33, YAD34, YDA34, YAD35, YDA35, YAD36, YDA36, YAD37, YDA37, YAD38, YDA38, YAD39, YDA39, YAD40, YDA40, YAD41, YDA41, YAD42, YDA42, YAD43, YDA43, YAD44, YDA44, YAD45, YDA45, YAD46, YDA46, YAD47, YDA47, YAD48, YDA48, YAD49, YDA49, YAD50, YDA50, YAD51, YDA51, YAD52, YDA52, YAD53, YDA53, YAD54, YDA54, YAD55, YDA55, YAD56, YDA56, YAD57, YDA57, YAD58, YDA58, YAD59, YDA59, YAD60, YDA60, YAD61, YDA61, YAD62, YDA62, YAD63, YDA63, YAD64, YDA64, YAD65, YDA65, YAD66, YDA66, YAD67, YDA67, YAD68, YDA68, YAD69, YDA69, YAD70, YDA70, YAD71, YDA71, YAD72, YDA72, YAD73, YDA73, YAD74, YDA74, YAD75, YDA75, YAD76, YDA76, YAD77, YDA77, YAD78, YDA78, YAD79, YDA79, YAD80, YDA80, YAD81, YDA81, YAD82, YDA82, YAD83, YDA83, YAD84, YDA84, YAD85, YDA85, YAD86, YDA86, YAD87, YDA87, YAD88, YDA88, YAD89, YDA89, YAD90, YDA90, YAD91, YDA91, YAD92, YDA92, YAD93, YDA93, YAD94, YDA94, YAD95, YDA95, YAD96, YDA96, YAD97, YDA97, YAD98, YDA98, YAD99, YDA99, YAD100, YDA100.
- External Components:** The diagram includes several external components connected to the IC, such as capacitors (C01, C02, C03, C04, C05, C06, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C17, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C29, C30, C31, C32, C33, C34, C35, C36, C37, C38, C39, C40, C41, C42, C43, C44, C45, C46, C47, C48, C49, C50, C51, C52, C53, C54, C55, C56, C57, C58, C59, C60, C61, C62, C63, C64, C65, C66, C67, C68, C69, C70, C71, C72, C73, C74, C75, C76, C77, C78, C79, C80, C81, C82, C83, C84, C85, C86, C87, C88, C89, C90, C91, C92, C93, C94, C95, C96, C97, C98, C99, C100), resistors (R01, R02, R03, R04, R05, R06, R07, R08, R09, R10, R11, R12, R13, R14, R15, R16, R17, R18, R19, R20, R21, R22, R23, R24, R25, R26, R27, R28, R29, R30, R31, R32, R33, R34, R35, R36, R37, R38, R39, R40, R41, R42, R43, R44, R45, R46, R47, R48, R49, R50, R51, R52, R53, R54, R55, R56, R57, R58, R59, R60, R61, R62, R63, R64, R65, R66, R67, R68, R69, R70, R71, R72, R73, R74, R75, R76, R77, R78, R79, R80, R81, R82, R83, R84, R85, R86, R87, R88, R89, R90, R91, R92, R93, R94, R95, R96, R97, R98, R99, R100), and a 28.6MHz oscillator.
