**SWITCHMODE™**  
**Ultrafast Power Rectifier**

**POWERTAP™ II Package**

Features mesa epitaxial construction with glass passivation. Ideally suited high frequency switching power supplies; free wheeling diodes and polarity protection diodes.

- Stable, High Temperature, Glass Passivated Junction
- Monolithic Dual Die Construction. May be Paralleled for High Current Output

**Mechanical Characteristics:**

- Case: Molded Epoxy with Metal Heatsink Base
- Weight: 80 grams (approximately)
- Finish: All External Surfaces Corrosion Resistant
- Base Plate Torques: See procedure given in the Package Outline Section
- Shipped 25 units per tray
- Marking: URP20040CT

## MAXIMUM MECHANICAL RATINGS

Terminal Penetration:	0.235 max
Terminal Torque:	70 in-lb max
Mounting Torque — Outside Holes:	70 in-lb max
Mounting Torque — Center Hole:	8–10 in-lb max
Seating Plane Flatness	1 mil per in. (between mounting holes)

## POWERTAP MECHANICAL DATA APPLIES OVER OPERATING TEMPERATURE

Note: While the POWERTAP is capable of sustaining these vertical and levered tensions, the intimate contact between POWERTAP and heat sink may be lost. This could lead to thermal runaway. The use of very flexible leads is recommended for the anode connections. Use of thermal grease is highly recommended.

## MOUNTING PROCEDURE

The POWERTAP package requires special mounting considerations because of the long longitudinal axis of the copper heat sink. It is important to follow the proper tightening sequence to avoid warping the heat sink, which can reduce thermal contact between the POWERTAP and heat sink.

### STEP 1:

Locate the POWERTAP on the heat sink and start mounting bolts into the threads by hand (2 or 3 turns).

### STEP 2:

Finger tighten the center bolt. The bolt may catch on the threads of the heat sink so it is important to make sure the face of the bolt or washer is in contact with the surface of the POWERTAP.

### STEP 3:

Tighten each of the end bolts between 5 to 10 in-lb.

### STEP 4:

Tighten the center bolt between 8 to 10 in-lb.

### STEP 5:

Finally, tighten the end bolts to 70 in-lb.
