Chip tantalum capacitors

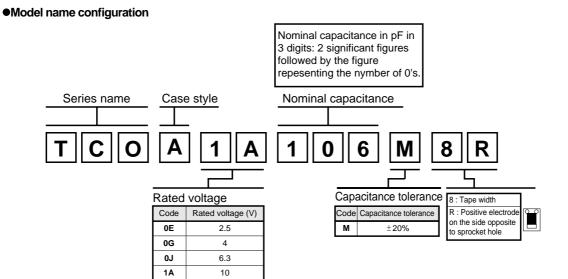

TCO Series

•Features (A)

- 1) Conductive polymer used for the cathode material.
- 2) Ultra-low ESR.
- (1/10 compared with the conventional type)
- 3) Screening by thermal shock.

•External dimensions (Unit : mm)

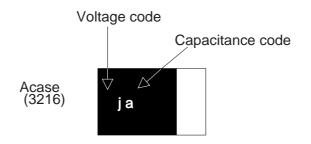

•Rated Table. Marking

TCO series

Tantalum capacitors

Characteristics

Item		Performance					Test conditions (based on JIS C 5101–1 and JIS C 5101–3)		
Operating Temperature		−55 °C to +105 °C					Voltage reduction when temperature exceeds+85 C		
Maximum operating temperature with no voltage derating		+85℃							
Rated voltage (VDC)		2.5 4 6.3 10					at 85°C		
Category voltage (VDC)		2 3.2 5 8			8		at 105°C		
Surge voltage (VDC)		3.2	5.2	8	13		at 85℃		
DC Leakage current		3μF or 0.1CV whichever is greater Shown in " Standard list "					Ratedvoltage for 5min		
Capacitance tolerance		±20% Shall be satisfied allowance range.					Measuring frequency : 120±12Hz Measuring voltage : 0.5Vrms +1.5 to 2V.DC Measuring circut : DC Equivalent series circuit		
Tangent of loss angle (Df, tan δ)		Shall be satisfied the voltage on " Standard list "					Measuring frequency : 120±12Hz Measuring voltage : 0.5Vrms +1.5 to 2V.DC Measuring circut : DC Equivalent series circuit		
ESR		Shall be satisfied the voltage on " Standard list "					Measuring frequency : 100±10kHz Measuring voltage : 0.5Vrms or less		
Resistance to Soldering heat						be nosignificant abnormality. S should be clear.	Dip in the solder bath Solder temp : 240±5°C Duration : 5±0.5s		
	L.C.	Less than 150% of initial limit				% of initial limit	Repetition : 1		
	ΔC / C	Within±20% of initial value			% o	f initial value			
	tan δ	Less than 150% of initial limit							

TCO series

Tantalum capacitors

Item		Performance	Test conditions (based on JIS C 5101–1 and JIS C 5101–3)					
Temperature Appearance cycle		There should be no significant abnormality.	Repetition : 5 cycles (1 cycle : steps 1 to 4) without discontinuation.					
	L.C	Less than 500% of initial limit	Temp. Time					
	ΔC / C	Within±20% of intial value	$1 -55\pm 3^{\circ}$ C 30 ± 3 min					
			2 Room temp. 3min.or less					
			$3 105\pm2^{\circ}C 30\pm3min$					
	Df (tan δ)	Less than 150% of initial limit	4 Room temp. 3min.or less					
Moisture resistance	Appearance	There should be no significant abnormality. The indications should be	After leaving the sample under such atmospheric condition that the temperature and humidity are 60 2°C and 90 to 95% RH,respectively,for 500 12h leave it at room temperature for 1 to 2h and then measure the					
	L.C	Less than 150% of initial limit						
	ΔC / C	+30% / -20%						
	Df (tan δ)	Less than 150% of initial limit	sample.					
Temperature	Temp.	_55℃						
Stebility	ΔC / C	Within 0/–20% of initial value						
	Df (tan δ)	Shall be satisfied the voltage on " Standard list "						
	L.C	_						
	Temp.	+105°C	-					
	ΔC / C	Within +50/0% of initial value						
	Df (tan δ)	Shall be satisfied the voltage on " Standard list "						
	L.C	Less than 1CV	1					
Surge voltage	Appearance	There should be no significant avnormality.	Apply the spesified sergevoltage every 5 ± 0.5 min. for 30 ± 5 s. each time in the atmospheric condition of 85 ± 2 °C. Repeat this rocedure 1,000 times.					
	L.C	Less than initial limit						
	ΔC / C	Within±20% of initial value						
	Df (tan δ)	Less than initial limit						

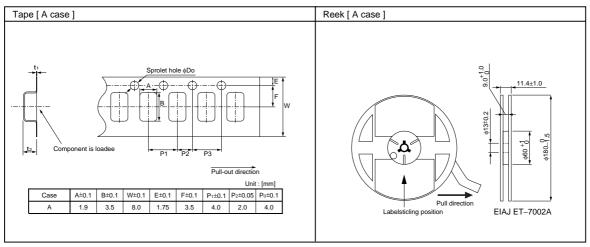

Item		Performance	Test conditions (based on JIS C 5101–1 and JIS C 5101–3)			
Loading at High temperature	Appearance	There should be nosignificant abnormality.	After applying the rated voltage for 1000 ⁺³⁶ h without discontinuation via the serial resistance			
	L.C	Less than 200% of initial limit	of 3 Ω or less at a temperature of 85 ±2 °C, leave			
	ΔC / C	Within±20% of initial value	the sample at room temperature / humidity for			
	Df (tan δ)	150% of initial limit less than	1 to 2h and measure the value.			
Terminal strength	Capacitance	The measured value should be stable.	A force is applied to the terminal until it bends			
	Appearance	There should nosignificant abnormality.	to 1mm and by a perscribed tool maintain the condition for5s.(See the figure below)			
			$\begin{array}{c} 50 \\ \hline \\ $			
Adhesiveness		The terminal should not come off.	Apply force of 5N in the two directions shown in the figure below for 10 1s after mounting the terminal on a circuit board.			
Dimensions		Refer to "External dimensions"	Measure using a caliper of JISB 7507 Class 2 or higher grade.			
Resistance to solvents		The indication should be clear	Dip in the isopropyl alcohol for 30 5s, at room temperature.			
Solderability		3/4 or more surface area of the solder coated terminal dipped in the soldering bath should be covered with the new solder.	Dip speed= 25 ± 2.5 mm / s Pre-treatment(accelerated aging): Leave the sample on the boiling distilled water for 1 h. Solder temp.: $235\pm 5^{\circ}$ C Duration : 2 ± 0.5 s Solder : H63A Flux : Rosin25% IPA75%			
Vibration	Capacitance	Measure value shoule not fluctuate during the measurement.	Frequency : 10 to 55 to 10Hz/min. Amplitude : 1.5mm Time : 2h each in X and Ydirections			
	Appearance	There should no significant abnormality.	Mounting : The terminal is soldered on a print circuit board.

• Electrical characteristics and operation notes

(1) Soldering conditions (soldering temperature and soldering time)

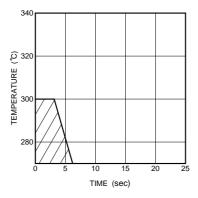

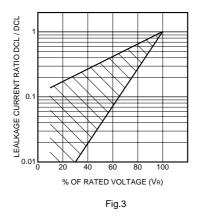

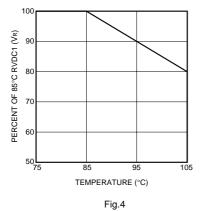

Fig.2 Hand soldering (Wattage : 30W MAX.)

(2) Leakage current-to-voltage ratio

(3) Derating voltage as function of temperature

85°C						
Surge Voltage	Category Voltage					
(V.DC)	(V.DC)					
3.2	2					
5.2	3.2					
8	5					
13	8					
	Surge Voltage (V.DC) 3.2 5.2 8					

(4) Reliability

The malfunction rate of tantalum solid state electrolytic capacitors varies considerably depending on the conditions of usage (ambient temperature, applied voltage, circuit resistance).

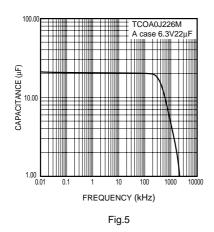

Formula for calculating malfunction rate

 $\lambda p = \lambda b \times (\pi E \times \pi SR \times \pi Q \times \pi CV)$

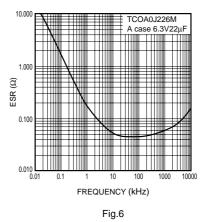

- λp : Malfunction rate stemming from operation
- λb : Basic malfunction rate
- π_E : Environmental factors
- πsr : Series resistance
- π_Q : Level of malfunction rate
- πcv : Capacitance

For details on how to calculate the malfunction rate stemming from operation, see the tantalum solid state electrolytic capacitors column in MIL-HDBK-217.

Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of with would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
