128K x 8 EEPROM

EEPROM Memory

AVAILABLE AS MILITARY SPECIFICATIONS

- SMD 5962-38267
- MIL-STD-883

FEATURES

- High speed: 150, 200, and 250ns
- Data Retention: 10 Years
- Low power dissipation, active current (20mW/MHz (TYP)), standby current (100µW(MAX))
- Single +5V (+10%) power supply
- Data Polling and Ready/Busy Signals
- Erase/Write Endurance (10,000 cycles in a page mode)
- Software Data protection Algorithm
- Data Protection Circuitry during power on/off
- Hardware Data Protection with RES pin
- Automatic Programming:
  Automatic Page Write: 10ms (MAX)
  128 Byte page size

OPTIONS MARKINGS

- Timing
  - 150ns access -15
  - 200ns access -20
  - 250ns access -25
- Packages
  - Ceramic LCC ECA No. 208
  - Ceramic Flat Pack F No. 306
  - Radiation Shielded Ceramic FP* SF No. 305
  - Ceramic SOJ DCJ No. 508
  - Plastic SOP DG
- Operating Temperature Ranges
  - -Military (-55°C to +125°C) XT
  - -Industrial (-40°C to +85°C) IT

***NOTE:** *Package lid is connected to ground (Vss).*

GENERAL DESCRIPTION

The Austin Semiconductor, Inc. AS58C1001 is a 1 Megabit CMOS Electrically Erasable Programmable Read Only Memory (EEPROM) organized as 131, 072 x 8 bits. The AS58C1001 is capable or in system electrical Byte and Page reprogrammability.

The AS58C1001 achieves high speed access, low power consumption, and a high level of reliability by employing advanced MNOS memory technology and CMOS process and circuitry technology and CMOS process and circuitry technology.

This device has a 128-Byte Page Programming function to make its erase and write operations faster. The AS58C1001 features Data Polling and a Ready/Busy signal to indicate completion of erase and programming operations.

This EEPROM provides several levels of data protection. Hardware data protection is provided with the RES pin, in addition to noise protection on the WE signal and write inhibit during power on and off. Software data protection is implemented using JEDEC Optional Standard algorithm.

The AS58C1001 is designed for high reliability in the most demanding applications. Data retention is specified for 10 years and erase/write endurance is guaranteed to a minimum of 10,000 cycles in the Page Mode.

FUNCTIONAL DESCRIPTION

AUTOMATIC PAGE WRITE

The Page Write feature allows 1 to 128 Bytes of data to be written into the EEPROM in a single cycle and allows the undefined data within 128 Bytes to be written corresponding to the undefined address (A_0 to A_6). Loading the first Byte of data, the data load window of 30µs opens for the second. In the same manner each additional Byte of data can be loaded within 30µs. In case CE\ and WE\ are kept high for 100µs after data input, the EEPROM enters erase and write automatically and only the input data can be written into the EEPROM. In Page mode the data can be written and accessed 10^4 times per page, and in Byte mode 10^3 times per Byte.

DATA\ POLLING

Data\ Polling allows the status of the EEPROM to be determined. If the EEPROM is set to Read mode during a Write cycle, and inversion of the last Byte of data to be loaded outputs from I/O, to indicate that the EEPROM is performing a Write operation.

WRITE PROTECTION

(1) Noise protection: Noise on a write cycle will not act as a trigger with a WE\ pulse of less than 20ns.

(2) Write inhibit: Holding OE\ low, WE\ high or CE\ high, inhibits a write cycle during power on/off.

WE\ AND CE\ PIN OPERATION

During a write cycle, addresses are latched by the falling edge of WE\ or CE\, and data is latched by the rising edge of WE\ or CE\.

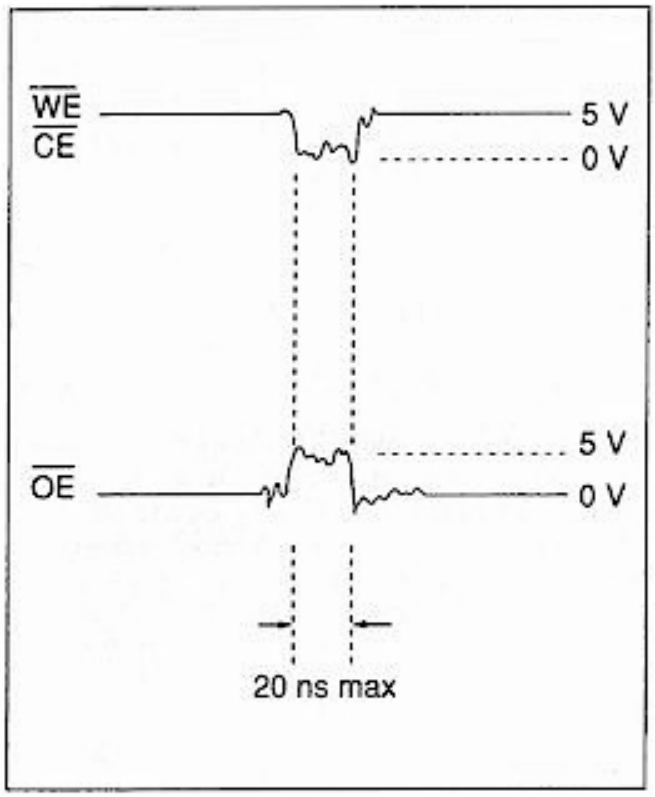
WRITE/ERASE ENDURANCE AND DATA RETENTION

The endurance with page programming is 10^4 cycles (1% cumulative failure rate) and the data retention time is more than 10 years when a device is programmed less than 10^4 cycles.

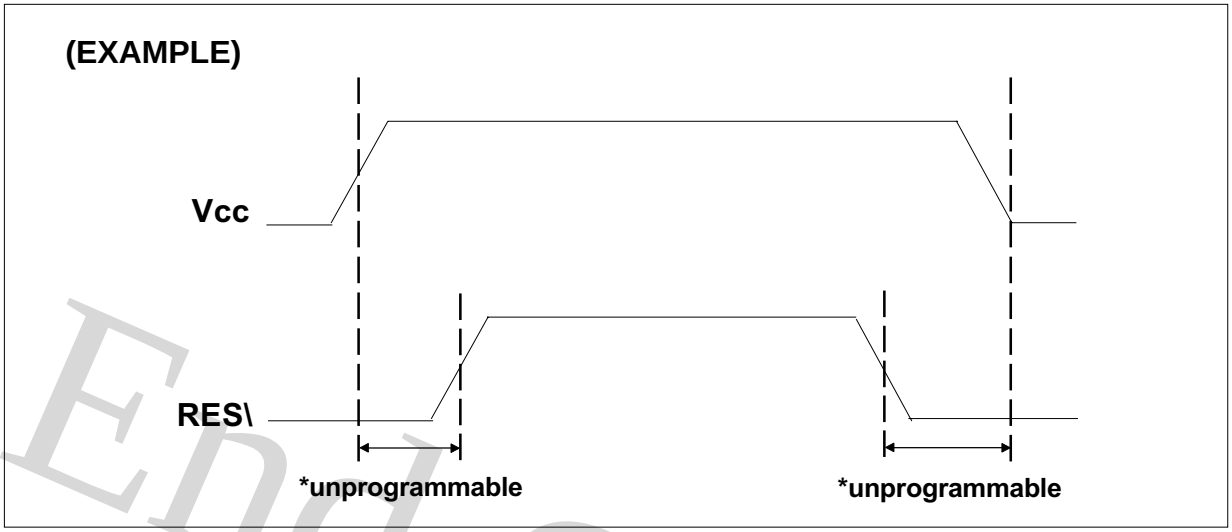
DATA PROTECTION

To protect the data during operation and power on/off, the AS58C1001 has:

1. Data protection against Noise on Control Pins (CE\, OE\, WE\) during Operation. During readout or standby, noise on the control pins may act as a trigger and turn the EEPROM to programming mode by mistake. To prevent this phenomenon, the AS58C1001 has a noise cancellation function that cuts noise if its width is 20ns or less in programming mode. Be careful not to allow noise of a width of more than 20ns on the control pins.



Austin Semiconductor, Inc. reserves the right to change products or specifications without notice.



End Of Life

FUNCTIONAL DESCRIPTION (continued)

DATA PROTECTION (continued)

2. Data protection at Vcc on/off.

When RES\ is low, the EEPROM cannot be erased and programmed. Therefore, data can be protected by keeping RES\ low when Vcc is switched. RES\ should be high during programming because it does not provide a latch function. When Vcc is turned on or off, noise on the control pins generated by external circuits (CPU, etc.) may turn the EEPROM to programming mode by mistake. To prevent this unintentional programming, the EEPROM must be kept in an unprogrammable, standby or readout state by using a CPU reset signal to RES\ pin.

In addition, when RES\ is kept high at Vcc on/off timing, the input level of control pins (CE\, OE\, WE\) must be held as CE\=Vcc or OE\=LOW or WE\=Vcc level.

3. Software Data Protection

To protect against unintentional programming caused by noise generated by external circuits, AS58C1001 has a Software data protection function. To initate Software data protection mode, 3 bytes of data must be input, followed by a dummy write cycle of any address and any data byte. This exact sequence switches the device into protection mode.

Write Address	Write Data (Normal Data Input)
5555	AA
2AAA	55
5555	A0

The Software data protection mode can be cancelled by inputting the following 6 Bytes. This changes the AS58C1001 to the Non-Protection mode, for normal operation.

Address	Data
5555	AA
2AAA	55
5555	80
5555	AA
2AAA	55
5555	20

ABSOLUTE MAXIMUM RATINGS*

Voltage on Vcc Supply Relative to Vss.....-0.5V to +7.0V[1]
Voltage on any pin Relative to Vss.....-0.6V to +7.0V[1]
Storage Temperature .....-65°C to +150°C
Operating Temperature Range.....-55°C to +125°C
Soldering Temperature Range.....260°C
Maximum Junction Temperature**.....+150°C
Power Dissipation.....1.0W

*Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

** Junction temperature depends upon package type, cycle time, loading, ambient temperature and airflow.

ELECTRICAL CHARACTERISTICS AND RECOMMENDED DC OPERATING CONDITIONS
