

**VI TELEFILTER****Filter specification****TFS 70H22****1/5****1. Measurement condition :**

Ambient temperature  $T_A$ : 25 °C.  
 Input power level: 0 dBm.  
 Terminating impedances in  $f_C$  \* ) :  
 for input: 180  $\Omega$  | - 17,6 pF.  
 for output: 240  $\Omega$  | - 13,7 pF.

**2. Characteristics :**

Remark:

Reference level for the relative attenuation  $a_{rel}$  of the **TFS 70H22** is the minimum of the pass band attenuation  $a_{min}$ . The minimum of the pass band attenuation  $a_{min}$  is defined as the insertion loss  $a_e$ . The reference frequency  $f_C$  is the arithmetic mean value of the upper and lower frequencies at the 20 dB filter attenuation level relative to the insertion loss  $a_e$ . The temperature coefficient of frequency  $T_{Cf}$  is valid both for the reference frequency  $f_C$  and the frequency response of the filter in the operating temperature range. The frequency shift of the filter in the operating temperature range is not included in the production tolerance scheme.

\*) The terminating impedances depend on parasitics and q-values of matching elements and the board used, and are to be understood as reference values only. Should there be additional questions do not hesitate to ask for an application note or contact our design team.

\*\*)  $f_{T_o}$  is reference frequency  $f_C$  at frequency inversion temperature ( $T_o$ )
