RF Power Transistor

The TPV8200B is designed for output stages in band IV and V TV transmitter amplifiers. It incorporates high value emitter ballast resistors, gold metallizations and offers a high degree of reliability and ruggedness.

Including input and output matching networks, the TPV8200B features high impedances. It can operate over the 470 MHz to 860 MHz bandwidth using a single fixed tuned circuit.

- To be used class AB for TV band IV and V.
- Specified 28 Volts, 860 MHz Characteristics
 - Output Power = 190 Watts (peak sync.)
 - Output Power = 150 Watts (CW)
 - Gain = 8 dB Min
- Circuit board photomaster available upon request by contacting RF Tactical Marketing in Phoenix, AZ.

CAUTION

The TPV8200B is a high power transistor and thermal adaptation is very important for good RF performance (see mechanical drawing for mounting recommendations).

Maximum Ratings are given to avoid destruction of the transistor; another limitation is MMTBF and the user must first determine the minimum wanted life-time in order to choose the right way of use for the device (see MMTBF curves), especially in case of CW application.
