

## Encoder For Remote Controller With Five Functions

### DESCRIPTION

The chip can be used with the decoder RCR02 to provide a complete control functions to the remote-controlled toy. The RCT02 has five input pins corresponding with the five function buttons i.e, forward, backward, rightward, leftward and turbo. The encoding circuit in the RCT02 sends digital codes to the two output pins SO and SC. The digital codes correspond to the definite function buttons or their combinations. The SO and SC outputs are used in wireless and infra-red applications respectively.

There is an internal oscillator in the RCT02. By adding an external resistor conveniently, the oscillator will be constructed. The oscillator frequency can be adjusted by the external resistor. The relative error between the frequencies of the two on chip oscillators in the RCT02 and RCR02 must be less than  $\pm 25\%$ .

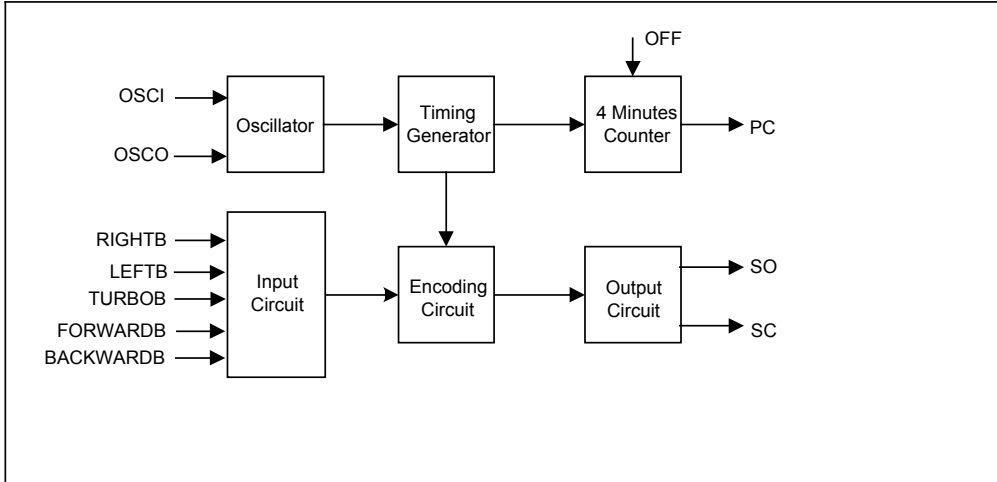

The auto-power-off function is achieved by an internal counter. When the RCT02 is powered on, the counter is reset and begin to count. Any action of push down or release the function button also reset the counter. The PC pin will keep on a high level until the counter counts up to about 4 minutes. The PC output is used to control on/off state of the external power supply. Pressing OFF button can also shut down the power supply. Press on any function button will wake up the chip promptly.

### FEATURES

- \*Five input pins used for five control buttons
- \*Operating power-supply voltage range: 2.5 to 5.0V
- \*Auto-power-off if no press on any button in 4 minutes or continuously press on any button over 4 minutes
- \*Manual-power-on/off with ON/OFF button
- \*One output pin used for external power control
- \*Press on any button as wake up
- \*On-chip oscillator with an external resistor
- \*Low operating current
- \*Few external components needed

Product Pin Configuration and Pin Description

Pin No.	Pin Name	Description
1	RIGHTB	The rightward function will be selected, if this pin is connected to GND
2	TESTB	This pin is used for testing mode
3	GND	Negative power supply
4	BACKWARDB	The backward function will be selected, if this pin is connected to GND
5	FORWARDB	The forward function will be selected, if this pin is connected to GND
6	TURBOB	The turbo function will be selected, if this pin is connected to GND
7	SC	Output pin of the encoding signal with carrier frequency
8	SO	Output pin of the encoding signal without carrier frequency
9	VDD	Positive power supply
10	PC	Power control output pin
11	OSCO	Oscillator output pin
12	OSCI	Oscillator input pin
13	OFF	This pin is used to shut down the external power supply
14	LEFTB	The leftward function will be selected, if this pin is connected to GND
