

INTRODUCTION

Molex's unique protection/engagement lever for its MU-LC adapter provides superior mating/unmating performance and latch protection compared to competitive versions.

The MU-LC conversion adapter helps to link communication equipment like routers and hubs that use LC connectors with transmission equipment that use MU connectors. The MU-LC conversion adapter eliminates the need for MU-LC patch cords, thus making the connection and interoperability between LC and MU systems much easier and cheaper.

MU-to-LC Plug-In Conversion Adapter

501789
Single Port

Specifications:

■ Reference Information

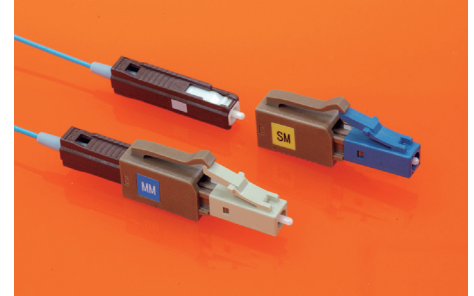

Packaging: Tray
Mates With: LC Receptacle
Use With: MU Plug
Designed In: mm

■ Electrical

Insertion Loss: 0.30 dB max.
Return Loss: 25 dB min.

■ Physical

Housing: PEI and PPS, glass-filled
Ferrule: Zirconia
Ferrule Flange: Brass
Metal Sleeve: Brass
Alignment Sleeve: Zirconia

FEATURES AND BENEFITS

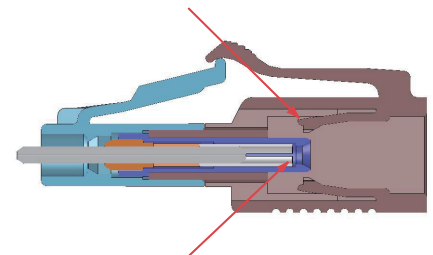

FEATURES

- Simplified and integrated single connector approach
- Latch protection/engagement lever
- Design flexibility type connectors
- Multimode and single-mode type in different colors
- Stable transmission

BENEFITS

- Eliminates the need for extra patch cords
- Protects latch from damage while enabling easy mating/unmating (only Molex offers this feature)
- Usable with one or two-port LC (SFP)
- Meets industry standards and easy to distinguish
- Low insertion force

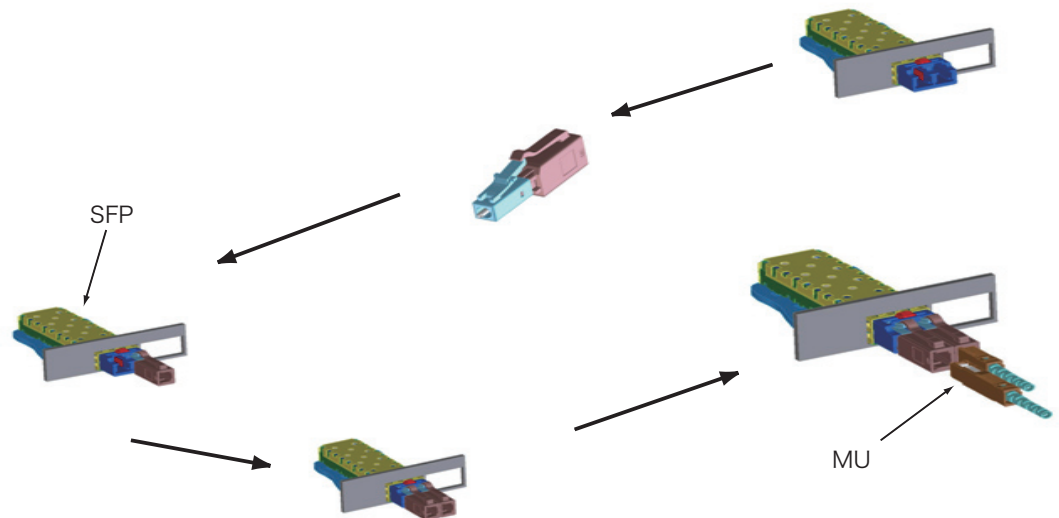

Upper and lower locks provide secure connection and an audible click when mated.

Metal sleeve aligns MU and LC ferrules.

APPLICATIONS

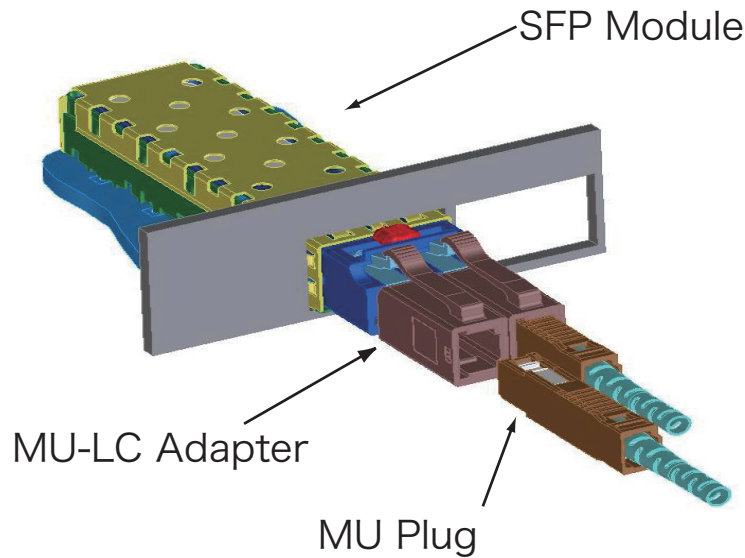

- Telecommunication
 - Hubs
 - Servers
- Other Markets
 - Other applications
