

Receive I/Q Module Using Low Barrier Schottky Mixers 850 - 960 MHz

Features

- Excellent Carrier Suppression ~44 dBc
- Sideband Suppression ~36 dBc
- -4 to +2 dBm LO Drive
- Excellent ACPR ~73 dBc
- Low Output Noise Floor ~160 dBm/Hz
- Phase Balance < 2.5 deg
- Lead-Free 6 x 6 mm PQFN Package
- 100% Matte Tin Plating over Copper
- Halogen-Free "Green" Mold Compound
- 260°C Reflow Compatible
- RoHS Compliant

Description

M/A-COM's MAIA-007860-000100 is a glass / silicon monolithic 850-960MHz, I/Q Modulator/Demodulator. Encapsulated in a low cost, miniature surface mount PQFN 6mm square, 28-lead plastic package, the die utilizes M/A-COM's unique HMIC silicon/glass and product performance The processes. GaAs maximizes the advantages provided by both processes through the realization of low loss passive elements and efficient diode technology. The net result provides excellent harmonic suppression and output noise performance. In addition. the incorporated monolithic design techniques provide unparalleled amplitude and phase balance performance during demodulation thus adding to the unit's overall versatility.

Applications

1

These modulators/demodulators are well suited for GSM and CDMA Cellular base station applications, as well as most RFID systems, particularly where small size and high performance are required. Typical applications include quadrature modulation requirements in wireless receivers and transmitters.

Ordering Information

Part Number	Package
MAIA-007860-000100	Bulk Packaging
MAIA-007860-0001TR	1000 piece reel
MAIA-007860-0001TB	Sample Test Board

Note: Reference Application Note M513 for reel size information.

Commitment to produce in volume is not guaranteed.

* Restrictions on Hazardous Substances, European Union Directive 2002/95/EC.

Functional Block Diagram

Pin Configuration

4. Exceeding any one or combination of these limits may cause permanent damage to this device.

 M/A-COM does not recommend sustained operation near these survivability limits.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
