Notes :
 In the HD44780, the data can be sent in either 4-bit 2-operation or 8-bit 1-operation so that it can interface to both 4- and 8-bit MPU's.
 (1) When interface data is 4-bits long, data is transferred using only 4 buses of DB4 ~ DB7 and DB0 ~ DB3 are not used. Data transfer between the HD44780 and the MPU completes when 4-bit data is transferred twice. Data of the higher order 4-bits (contents of DB4 ~ DB7 when interface data is 8-bits long) is transferred first and then lower order 4-bits (contents of DB0 ~ DB3 when interface data is 8-bits long).
 (2) When interface data is 8-bits long, data is transferred using 8 data buses of DB0 ~ DB7.
