

3.3V DIFFERENTIAL LVPECL-to-LVTTL TRANSLATOR

Precision Edge®
SY10ELT21L
SY100ELT21L

FEATURES

- 3.3V power supply
- 2.0ns typical propagation delay
- Low power
- Differential LVPECL inputs
- 24mA TTL outputs
- Flow-through pinouts
- Available in 8-pin SOIC package

DESCRIPTION

The SY10/100ELT21L are single differential LVPECL-to-LVTTL translators using a single +3.3V power supply. Because LVPECL (Low Voltage Positive ECL) levels are used, only +3.3V and ground are required. The small outline 8-lead SOIC package and low skew single gate design make the ELT21L ideal for applications that require the translation of a clock or data signal where minimal space, low power, and low cost are critical.

V_{BB} allows a differential, single-ended, or AC-coupled interface to the device. If used, the V_{BB} output should be bypassed to V_{CC} with 0.01 μ F capacitor.

Under open input conditions, the /D will be biased at a $V_{CC}/2$ voltage level and the D input will be pulled to ground. This condition will force the Q output low to provide added stability.

The ELT21L is available in both ECL standards: the 10ELT is compatible with positive ECL 10H logic levels, while the 100ELT is compatible with positive ECL 100K logic levels.

PIN NAMES

Pin	Function
Q	TTL Output
D, /D	Differential LVPECL Inputs
V_{CC}	+3.3V Supply
V_{BB}	Reference Output
GND	Ground

NOTE:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

NOTES:

1. Part-to-Part Skew considering HIGH-to-HIGH transitions at common V_{CC} level.
2. These parameters are guaranteed but not tested.
3. Frequency at which output levels will meet a 0.8V to 2.0V minimum swing.
4. The f_{MAX} value is specified as the minimum guaranteed maximum frequency. Actual operational maximum frequency may be greater.
5. 100mV input guarantees full logic at output.
