

UT71XX

CMOS IC

THREE-TERMINAL LOW POWER VOLTAGE REGULATORS

DESCRIPTION

The UTC **UT71XX** series is a set of three- Terminal low power voltage regulators implemented in CMOS technology. They are available with several fixed output voltages ranging from 1.5V~7.0V. The advantage of CMOS technology is low voltage dropout and low quiescent current.

Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain variable voltages and currents.

FEATURES

- * Accurate output voltage range ($\pm 2.4\%$)
- * Low power consumption
- * Low voltage dropout
- * Low temperature coefficient
- * Wide operating voltage (24V Max.)

ORDERING INFORMATION

Ordering Number		Package	Pin Assignment			Packing
Lead free	Halogen Free		1	2	3
