

Linear Systems replaces discontinued Siliconix U426

The U426 is a high input impedance Monolithic Dual N-Channel JFET

The U426 monolithic dual n-channel JFET is designed to provide very high input impedance for differential amplification and impedance matching. Among its many unique features, this series offers operating gate current specified at -500 fA. The U426 is a direct replacement for discontinued Siliconix U426.

The hermetically sealed TO-71 & TO-78 packages are well suited for military applications. The 8 Pin P-DIP and 8 Pin SOIC provide ease of manufacturing, and the symmetrical pinout prevents improper orientation.

(See Packaging Information).
