Product Description

The RF6505 integrates a complete solution in a single Front End Module (FEM) for WiFi and ZigBee® applications in the 2.4GHz to 2.5GHz band. This FEM integrates the PA plus harmonic filter in the transmit path and the LNA with bypass mode in the receive side. It provides a single balanced TDD access for RX and TX paths along with two ports on the output for connecting a diversity solution or a test port.
