- 1.3 Connection between PC Ground and Metal frame.  
 Metal frame of the module should be grounded with PC's ground in case that protection film is being peeled off while operating the module. Unless you connect between metal frame and PC's Ground. PC's system happens to shut down due to the influence of electrostatic discharge caused by peeling off the protection film.

## 2. OPTICAL CHARACTERISTICS

The following items are measured on the conditions that this unit operation (TFT panel and Back-light) and measuring systems are stable. (more than 30minutes' operation)

The ambient light excluding The Back-light unit is nothing.

- Measuring equipment : TOPCON BM-7, Prichard 1980A, or equivalent
- Measuring point : Active area center

VCM is common mode voltage of LVDS transmitter/receiver.

The input terminal of LVDS transmitter is terminated with 100Ω.

2) f<sub>v</sub>=60Hz, f<sub>CLK</sub>=71MHz, V<sub>DD</sub>=3.3V, DC Current.

Typical value is measured when displaying vertical 64 gray scale.

Maximum is measured when displaying Vertical-stripe (Black-Gray 7).

3) As this module contains 0.8A fuse, prepare current source that is enough for cutting current fuse when a trouble happens. (larger than 2A.)

Note 1) I<sub>L</sub> is Current of GND side.

2) Higher I<sub>L</sub> cause the short life time of CFL.

3) Lamp frequency may produce interference with Hsync frequency, causing beat or flicker on the display.

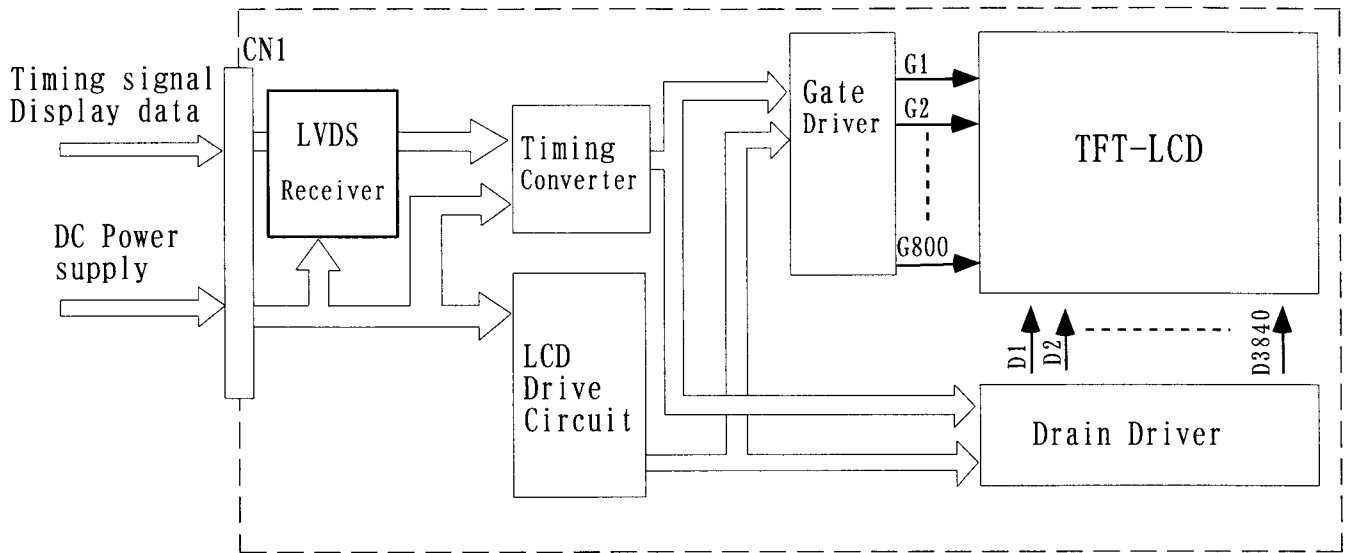

4) Starting Lamp Voltage is specified to the output of inverter with ballast capacitance > 22pF.

5) Ta=0°C

6) CFL Life Time is the period that the brightness is half as much as the initial.
