

Product Features

- GaN on SiC Chip on Board
- Surface Mount Hybrid Type
- Asymmetric Doherty Amplifier
- High Efficiency
- No Matching circuit needed

Applications

- RF Sub-Systems
- Base Station
- RRH
- 4G/LTE system
- Small cell

Package Type : NP-8CL

Description

Accommodating the future of 4G/LTE small cells, RFHIC introduces RTH23007-10 amplifier fabricated using an advanced high power density Gallium Nitride (GaN) semiconductor process. This high performance amplifier achieves high efficiency of 45%, and powers 7W over the frequency range from 2300MHz to 2400MHz. Integrated with Asymmetrical Doherty configurations, RTH Series is packaged in a very small form-factor 28 x 19 x 4.8mm on AlN (aluminum nitride) board which provides excellent thermal dissipation.

Electrical Specifications @ $V_{ds} = 31V$, $T_a = 25^\circ C$

PARAMETER	UNIT	MIN	TYP	MAX	CONDITION
Frequency Range	MHz	2300	-	2400	ZS = ZL = 50 ohm
Power Gain	dB	12	14	-	Carrier Idq = 150mA Vgp = -4.8V
Gain Flatness		-3.0	-	3.0	
Input Return Loss		-	-9	-6	
Pout @ Average	dBm	-	38.5	-	Pulse Width=20us, Duty10%
Pout @ Psat	dBm	46	47	-	
ACLR @ BW 10MHz LTE (PAPR 7.5dB)	dBc	-	-27	-24	Non DPD
		-	-53	-	With DPD
Drain Efficiency	%	40	45	-	
Carrier Idq	mA	-	120	-	
Total Ids		-	500	-	
Supply Voltage	V	-	-3.5	-2.0	Vgc
		-	-5.0	-4.0	Vgp
		30.5	31	31.5	Vds

Caution

The drain voltage must be supplied to the device after the gate voltage is supplied
 Turn on : Turn on the Gate voltage supply and last turn on the Drain voltage supplies
 Turn off : Turn off the Drain voltage and last turn off the Gate voltage

Note

1. ACLR Measured Pout=38.5dBm @ $f_c \pm 10\text{MHz} / 9.015\text{MHz}$
 LTE 10MHz 1FA PAPR=7.5dB @ 0.01% probability on CCDF, (DPD Engine: Optichron OP6180)
2. RTH Series have internal DC blocking capacitors at the RF input and output ports

Mechanical Specifications

3	GND	6	V _{ds}	9	GND	12	V _{gc}

Recommended Pattern

Recommended Mounting Configuration

*** Mounting Configuration Notes**

1. For the proper performance of the device, Ground / Thermal via holes must be designed to remove heat.
2. To properly use heatsink, ensure the ground/thermal via hole region to contact the heatsink. We recommend the mounting screws be added near the heatsink to mount the board
3. In designing the necessary RF trace, width will depend upon the PCB material and construction.
4. Use 1 oz. Copper minimum thickness for the heatsink.
5. Do not put solder mask on the backside of the PCB in the region where the board contacts the heatsink
6. We recommend adding as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.

Precautions

This product is a Gallium Nitride Transistor.

The Gallium Nitride Transistor requires a Negative Voltage Bias which operates alongside a Positive Voltage Bias. These Biases are applied in accordance to the Sequence during Turn-On and Turn-Off.

The Pallet Amplifier does not have a built-in Bias Sequence Circuit. Therefore, users need to either apply positive voltages and negative voltages in the required sequence, or add an external Bias Circuit to this Amplifier.

The required sequence for power supply is as follows.

During Turn-On

1. Connect GND
2. Apply Gate Voltage (V_{gc} and V_{gp})
3. Apply Drain Voltage (V_{ds})
4. Apply the RF Power

During Turn-Off

1. Turn off RF power
2. Turn off Drain Voltage (V_{ds}), and then, turn off the Gate Voltage (V_{gc} and V_{gp})
3. Remove all connections
