MITSUBISHI MICROCOMPUTERS

M37733EHBXXXFP
M37733EHBFS

PROM VERSION OF M37733MHBXXXFP

DESCRIPTION

The M37733EHBXXXFP is a single-chip microcomputer using the 7700 Family core. This single-chip microcomputer has a CPU and a bus interface unit. The CPU is a 16-bit parallel processor that can be an 8-bit parallel processor, and the bus interface unit enhances the memory access efficiency to execute instructions fast. This microcomputer also includes a 32 kHz oscillation circuit, in addition to the PROM, RAM, multiple-function timers, serial I/O, A-D converter, and so on.

The M37733EHBXXXFP has the same function as the M37733MHBXXXFP except that the built-in ROM is PROM. (Refer to the basic function blocks description.) For program development, the M37733EHBFS with erasable ROM that is housed in a windowed ceramic LCC is also provided.

FEATURES

- Number of basic instructions 103
- Memory size PROM ..... 124 Kbytes
  RAM ..... 3968 bytes
- Instruction execution time
  The fastest instruction at 25 MHz frequency ..... 160 ns
- Single power supply ..... 5 V ± 10%
- Low power dissipation (at 25 MHz frequency)
  .....47.5 mW (Typ.)
- Interrupts ..... 19 types, 7 levels
- Multiple-function 16-bit timer ..... 5 + 3
- Serial I/O (UART or clock synchronous) 3
- 10-bit A-D converter ..... 8-channel inputs
- Watchdog timer
- Programmable input/output
  (ports P0, P1, P2, P3, P4, P5, P6, P7, P8) 68
- Clock generating circuit ..... 2 circuits built-in

APPLICATION

Control devices for general commercial equipment such as office automation, office equipment, and so on.

Control devices for general industrial equipment such as communication equipment, and so on.

Note. Do not use the windowed EPROM version for mass production, because it is a tool for program development (for evaluation).

FUNCTIONS OF M37733EHBXXXFP

Parameter		Functions
Number of basic instructions		103
Instruction execution time		160 ns (the fastest instruction at external clock 25 MHz frequency)
Memory size	PROM	124 Kbytes
	RAM	3968 bytes
Input/Output ports	P0 – P2, P4 – P8	8-bit × 8
	P3	4-bit × 1
Multi-function timers	TA0, TA1, TA2, TA3, TA4	16-bit × 5
	TB0, TB1, TB2	16-bit × 3
Serial I/O		(UART or clock synchronous serial I/O) × 3
A-D converter		10-bit × 1 (8 channels)
Watchdog timer		12-bit × 1
Interrupts		3 external types, 16 internal types Each interrupt can be set to the priority level (0 – 7.)
Clock generating circuit		2 circuits built-in (externally connected to a ceramic resonator or a quartz-crystal oscillator)
Supply voltage		5 V ± 10%
Power dissipation		47.5 mW (at external clock 25 MHz frequency)
Input/Output characteristic	Input/Output voltage	5 V
	Output current	5 mA
Memory expansion		Maximum 16 Mbytes
Operating temperature range		–20 to 85 °C
Device structure		CMOS high-performance silicon gate process
Package	M37733EHBXXXFP	80-pin plastic molded QFP (80P6N-A)
	M37733EHBFS	80-pin ceramic LCC (with a window) (80D0)

PIN DESCRIPTION

Pin	Name	Input/Output	Functions
Vcc, Vss	Power source		Apply 5 V ± 10% to Vcc and 0 V to Vss.
CNVss	CNVss input	Input	This pin controls the processor mode. Connect to Vss for the single-chip mode and the memory expansion mode, and to Vcc for the microprocessor mode.
$\overline{RESET}$	Reset input	Input	When "L" level is applied to this pin, the microcomputer enters the reset state.
X_{IN}	Clock input	Input	These are pins of main-clock generating circuit. Connect a ceramic resonator or a quartz-crystal oscillator between X_{IN} and X_{OUT}. When an external clock is used, the clock source should be connected to the X_{IN} pin, and the X_{OUT} pin should be left open.
X_{OUT}	Clock output	Output	
$\overline{E}$	Enable output	Output	This pin functions as the enable signal output pin which indicates the access status in the internal bus. When output level of $\overline{E}$ signal is "L", data/instruction read or data write is performed.
BYTE	External data bus width selection input	Input	In the memory expansion mode or the microprocessor mode, this pin determines whether the external data bus has an 8-bit width or a 16-bit width. The data bus has a 16-bit width when "L" signal is input and an 8-bit width when "H" signal is input.
AVcc, AVss	Analog power source input		Power source input pin for the A-D converter. Externally connect AVcc to Vcc and AVss to Vss.
V_{REF}	Reference voltage input	Input	This is reference voltage input pin for the A-D converter.
$P0_0$ – $P0_7$	I/O port P0	I/O	In the single-chip mode, port P0 becomes an 8-bit I/O port. An I/O direction register is available so that each pin can be programmed for input or output. These ports are in the input mode when reset. In the memory expansion mode or the microprocessor mode, these pins output address (A_0 – A_7).
$P1_0$ – $P1_7$	I/O port P1	I/O	In the single-chip mode, these pins have the same functions as port P0. When the BYTE pin is set to "L" in the memory expansion mode or the microprocessor mode and external data bus has a 16-bit width, high-order data (D_8 – D_{15}) is input/output or an address (A_8 – A_{15}) is output. When the BYTE pin is "H" and an external data bus has an 8-bit width, only address (A_8 – A_{15}) is output.
$P2_0$ – $P2_7$	I/O port P2	I/O	In the single-chip mode, these pins have the same functions as port P0. In the memory expansion mode or the microprocessor mode, low-order data (D_0 – D_7) is input/output or an address (A_0 – A_7) is output .
$P3_0$ – $P3_3$	I/O port P3	I/O	In the single-chip mode, these pins have the same function as port P0. In the memory expansion mode or the microprocessor mode, R/$\overline{W}$, $\overline{BHE}$, ALE, and $\overline{HLDA}$ signals are output.
$P4_0$ – $P4_7$	I/O port P4	I/O	In the single-chip mode, these pins have the same functions as port P0. In the memory expansion mode or the microprocessor mode, $P4_0$, $P4_1$, and $P4_2$ become $\overline{HOLD}$ and $\overline{RDY}$ input pins, and a clock ϕ_1 output pin, respectively. Functions of the other pins are the same as in the single-chip mode. However, in the memory expansion mode, $P4_2$ can be selected as an I/O port.
$P5_0$ – $P5_7$	I/O port P5	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins also function as I/O pins for timers A0 to A3 and input pins for key input interrupt input ($\overline{KI_0}$ – $\overline{KI_3}$).
$P6_0$ – $P6_7$	I/O port P6	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins also function as I/O pins for timer A4, input pins for external interrupt input ($\overline{INT_0}$ – $\overline{INT_2}$) and input pins for timers B0 to B2. $P6_7$ also functions as sub-clock ϕ_{SUB} output pin.
$P7_0$ – $P7_7$	I/O port P7	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins function as input pins for A-D converter. $P7_2$ to $P7_5$ also function as I/O pins for UART2. Additionally, $P7_6$ and $P7_7$ have the function as the output pin (X_{COUT}) and the input pin (X_{CIN}) of the sub-clock (32 kHz) oscillation circuit, respectively. When $P7_6$ and $P7_7$ are used as the X_{COUT} and X_{CIN} pins, connect a resonator or an oscillator between the both.
$P8_0$ – $P8_7$	I/O port P8	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins also function as I/O pins for UART 0 and UART 1.

PIN DESCRIPTION (EPROM MODE)

Pin	Name	Input/Output	Functions
V_{CC}, V_{SS}	Power supply		Supply 5V±10% to V_{CC} and 0V to V_{SS}.
CNV$_{SS}$	V_{PP} input	Input	Connect to V_{PP} when programming or verifying.
BYTE	V_{PP} input	Input	Connect to V_{PP} when programming or verifying.
$\overline{RESET}$	Reset input	Input	Connect to V_{SS}.
X_{IN}	Clock input	Input	Connect a ceramic resonator between X_{IN} and X_{OUT}.
X_{OUT}	Clock output	Output	
$\overline{E}$	Enable output	Output	Keep open.
AV$_{CC}$, AV$_{SS}$	Analog supply input		Connect AV$_{CC}$ to V_{CC} and AV$_{SS}$ to V_{SS}.
V_{REF}	Reference voltage input	Input	Connect to V_{SS}.
P0$_0$ – P0$_7$	Address input (A$_0$ – A$_7$)	Input	Port P0 functions as the lower 8 bits address input (A$_0$ – A$_7$).
P1$_0$ – P1$_7$	Address input (A$_8$ – A$_{15}$)	Input	Port P1 functions as the higher 8 bits address input (A$_8$ – A$_{15}$).
P2$_0$ – P2$_7$	Data I/O (D$_0$ – D$_7$)	I/O	Port P2 functions as the 8 bits data input/output (D$_0$ – D$_7$).
P3$_0$	Address input (A$_{16}$)	Input	P3$_0$ functions as the most significant bit address input (A$_{16}$).
P3$_1$ – P3$_3$	Input port P3	Input	Connect to V_{SS}.
P4$_0$ – P4$_7$	Input port P4	Input	Connect to V_{SS}.
P5$_0$ – P5$_7$	Control signal input	Input	P5$_0$, P5$_1$, and P5$_2$ function as $\overline{PGM}$, $\overline{OE}$, and $\overline{CE}$ input pins respectively. Connect P5$_3$, P5$_4$, P5$_5$, and P5$_6$ to V_{CC}. Connect P5$_7$ to V_{SS}.
P6$_0$ – P6$_7$	Input port P6	Input	Connect to V_{SS}.
P7$_0$ – P7$_7$	Input port P7	Input	Connect to V_{SS}.
P8$_0$ – P8$_7$	Input port P8	Input	Connect to V_{SS}.

BASIC FUNCTION BLOCKS

The M37733EHBXXXFP has the same functions as the M37733MHBXXXFP except for the following:

(1) The built-in ROM is PROM.
(2) The status of bit 3 of the oscillation circuit control register 1 (address $6F_{16}$) at a reset is different.
(3) The usage condition of bit 3 of the oscillation circuit control register 1 is different.

Accordingly, refer to the basic function blocks description in the M37733MHBXXXFP except for Figure 1 (bit configuration of the oscillation circuit control register 1) and Figure 3 (microcomputer internal status during reset).

In the M37733EHBXXXFP, bit 3 of the oscillation circuit control register 1 must be "1". (Refer to Figure 1.) The status of this bit at a reset is "1".

EPROM MODE

The M37733EHBXXXFP features an EPROM mode in addition to its normal modes. When the $\overline{\text{RESET}}$ signal level is "L", the chip automatically enters the EPROM mode. Table 1 list the correspondence between pins and Figure 4 shows the pin connections in the EPROM mode.

The EPROM mode is the 1M mode for the EPROM that is equivalent to the M5M27C101K.

When in the EPROM mode, ports P0, P1, P2, $P3_0$, $P5_0$, $P5_1$, $P5_2$, CNV_{SS}, and BYTE are used for the EPROM (equivalent to the M5M27C101K).

When in this mode, the built-in PROM can be programmed or read from using these pins in the same way as with the M5M27C101K.

This chip does not have Device Identifier Mode, so that set the corresponding program algorithm. The program area should specify address 01000_{16} – $1FFFF_{16}$.

Connect the clock which is either ceramic resonator or external clock to X_{IN} pin and X_{OUT} pin.

FUNCTION IN EPROM MODE
1M mode (equivalent to the M5M27C101K)

Reading

To read the EPROM, set the $\overline{CE}$ and $\overline{OE}$ pins to a "L" level. Input the address of the data (A_0 – A_{16}) to be read, and the data will be output to the I/O pins D_0 – D_7. The data I/O pins will be floating when either the $\overline{CE}$ or $\overline{OE}$ pins are in the "H" state.

Programming

Programming must be performed in 8 bits by a byte program. To program to the EPROM, set the $\overline{CE}$ pin to a "L" level and the $\overline{OE}$ pin to a "H" level. The CPU will enter the programming mode when 12.5 V is applied to the V_{PP} pin. The address to be programmed to is selected with pins A_0 – A_{16}, and the data to be programmed is input to pins D_0 – D_7. Set the $\overline{PGM}$ pin to a "L" level to being programming.

Erasing

To erase data on this chip, use an ultraviolet light source with a 2537 Angstrom wave length. The minimum radiation power necessary for erasing is 15 J/cm^2.

Programming operation

To program the M37733EHBXXXFP, first set V_{CC} = 6 V, V_{PP} = 12.5 V, and set the address to 01000_{16}. Apply a 0.2 ms programming pulse, check that the data can be read, and if it cannot be read OK, repeat the procedure, applying a 0.2 ms programming pulse and checking that the data can be read until it can be read OK. Record the accumulated number of pulse applied (X) before the data can be read OK, and then write the data again, applying a further once this number of pulses (0.2 × X ms).

When this series of programming operations is complete, increment the address, and continue to repeat the procedure above until the last address has been reached.

Finally, when all addresses have been programmed, read with V_{CC} = V_{PP} = 5 V (or V_{CC} = V_{PP} = 5.5 V).

Table 2. I/O signal in each mode

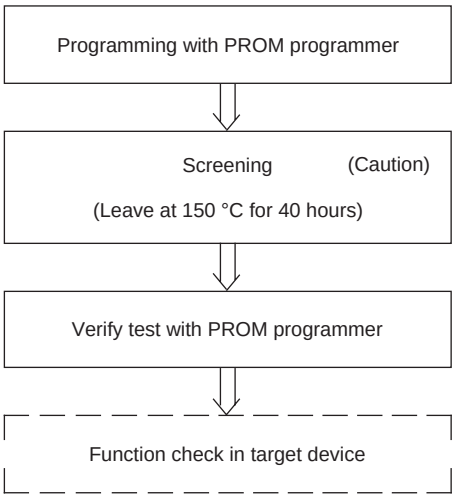
SAFETY INSTRUCTIONS

(1) Sunlight and fluorescent lamp contain light that can erase written information. When using in read mode, be sure to cover the transparent glass portion with a seal or other materials (ceramic package product).
(2) Mitsubishi Electric corp. provides the seal for covering the transparent glass. Take care that the seal does not touch the read pins (ceramic package product).
(3) Clean the transparent glass before erasing. Fingers' fat and paste disturb the passage of ultraviolet rays and may affect badly the erasure capability (ceramic package product).
(4) A high voltage is used for programming. Take care that over-voltage is not applied. Take care especially at power on.
(5) The programmable M37733EHBFP that is shipped in blank is also provided. For the M37733EHBFP, Mitsubishi Electric corp. does not perform PROM programming test and screening following the assembly processes. To improve reliability after programming, performing programming and test according to the flow below before use is recommended.



Caution : Never expose to 150 °C exceeding 100 hours.

ADDRESSING MODES

The M37733EHBXXXFP has 28 powerful addressing modes. Refer to the "7700 Family Software Manual" for the details.

MACHINE INSTRUCTION LIST

The M37733EHBXXXFP has 103 machine instructions. Refer to the "7700 Family Software Manual" for the details.

Notes 1. This applies when the main-clock division selection bit = “0”.

2. f(f_2) represents the clock f_2 frequency.
For the relation to the main clock and sub clock, refer to Table 9 in data sheet “M37733MHBXXXFP”.

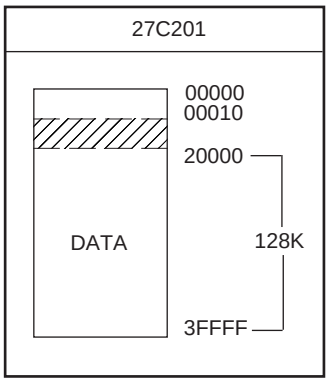
※1. Confirmation

Specify the name of the product being ordered and the type of EPROMs submitted.
Three sets of EPROMs are required for each pattern.
If at least two of the three sets of EPROMs submitted contain the identical data, we will produce writing to PROM based on this data. We shall assume the responsibility for errors only if the written PROM data on the products we produce differ from this data. Thus, the customer must be especially careful in verifying the data contained in the EPROMs submitted.

Checksum code for entire EPROM areas | | | | | (hexadecimal notation)

EPROM Type :



Note : Make sure that address $01FFFF_{16}$ of the microcomputer's internal ROM corresponds to address $3FFFF_{16}$ of EPROM.

(1) Set "FF_{16}" in the shaded area.
(2) Address 0_{16} to $0F_{16}$ are the area for storing the data on model designation.This area must be written with the data shown below.
Address and data are written in hexadecimal notation.

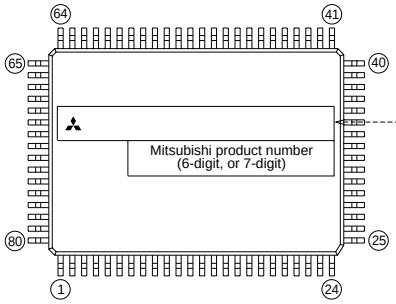
80P6N (80-PIN QFP) MARK SPECIFICATION FORM

Mitsubishi IC catalog name

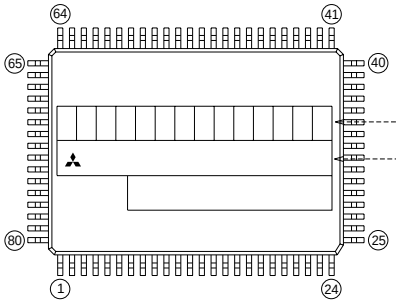
Please choose one of the marking types below (A, B, C), and enter the Mitsubishi IC catalog name and the special mark (if needed).

A. Standard Mitsubishi Mark



Mitsubishi IC catalog name

B. Customer's Parts Number + Mitsubishi IC Catalog Name



Customer's Parts Number

Note : The fonts and size of characters are standard Mitsubishi type.

Mitsubishi IC catalog name

Notes 1 : The mark field should be written right aligned.

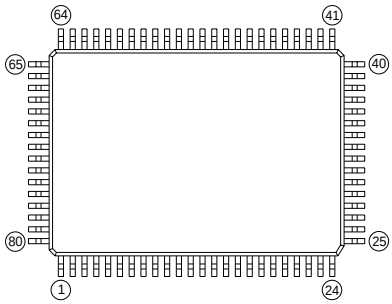
2 : The fonts and size of characters are standard Mitsubishi type.

3 : Customer's parts number can be up to 14 alphanumeric characters for capital letters, hyphens, commas, periods and so on.

4 : If the Mitsubishi logo is not required, check the box below.

Mitsubishi logo is not required ☐

C. Special Mark Required



Notes1 : If special mark is to be printed, indicate the desired layout of the mark in the left figure. The layout will be duplicated technically as close as possible.
Mitsubishi product number (6-digit, or 7-digit) and Mask ROM number (3-digit) are always marked for sorting the products.

2 : If special character fonts (e,g., customer's trade mark logo) must be used in Special Mark, check the box below.
For the new special character fonts, a clean font original (ideally logo drawing) must be submitted.

Special character fonts required ☐

Keep safety first in your circuit designs!

- Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams and charts, represent information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
  Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
