Chip select signal that selects the control block register.

DA0 to DA2 (input)
Address for accessing the ATAPI interface registers.

$\overline{\text{DASP}}$ (input/output)
Drive 1 is output and drive 0 is input.
Signal used to indicate to drive 0 that drive 1 exists.

DD0 to DD15 (input/output)
16-bit data bus. This interface supports both 8-bit and 16-bit transfers.

$\overline{\text{DIOR}}$ (input)
Read strobe from the host.

$\overline{\text{DIOW}}$ (input)
Write strobe from the host.

$\overline{\text{DMACK}}$ (input)
Acknowledge signal from the host used during DMA transfers. Corresponds to the DMARQ request signal from the drive.

DMARQ (input)
Drive request signal used during DMA transfers.

HINTRQ (output)
Drive interrupt request signal to the host.

$\overline{\text{IOCS16}}$ (output)
Signal asserted by the drive when the drive supports 16-bit transfers.
This signal is not asserted during DMA transfers.

IORDY (output)
Indicates that the drive is ready to respond. Used during data transfers.
This signal will be low when the drive is not ready.

$\overline{\text{PDIAG}}$ (input/output)
Signal asserted by drive 1 to indicate to drive 0 that diagnostics have completed.

$\overline{\text{HRST}}$ (input)
Reset signal from the host. The IDE interface is reset by a low-level input to this pin.

<Microcontroller Interface Pins>

$\overline{\text{CS}}$ (input)
Chip select signal from the microcontroller. The microcontroller interface is active when this pin is low.

$\overline{\text{RD}}$, $\overline{\text{WR}}$ (input)
Connect the microcontroller read and write lines to these inputs.

$\overline{\text{SWAIT}}$ (input)
Wait signal output to the microcontroller. When accessing buffer RAM, the microcontroller must wait if this pin is low.

SUA0 to SUA7 (input)

D0 to D7 (input)
Microcontroller data bus. These pins have built-in pull-up resistors.

$\overline{\text{INT0}}$, $\overline{\text{INT1}}$ (output)
Interrupt request signals output to the microcontroller. $\overline{\text{INT1}}$ can be set to output the ATAPI interrupt by setting INT1EN (Conf-R11 bit 7)
