The TAM series is a range of high performance 25W DC/DC-converters with very high power density. They provide a cost effective solution in industrial, datacommunication and telecom applications with limited space on PCB. These converters are built in SMT-hybrid technology on a ceramic substrate which together with a metal case provide a very good heat dissipation. No additional heatsink is necessary for operating temperature up to +75 °C (resp. +85°C) at full load.

Reduction of conducted Noise with external Capacitor

In order to meet conducted emissions EN55022-A and EN55011-A a capacitor at the input side of triple output models and B-version models has to be installed.

Note:

C1 = Electrolytic capacitor low ESR type or MLCC Cap for SMD (TCCR or THCR type from Nippon Chemi-Con)

The value of C1 is between 1µF and 10 µF, depending on the load

For 24V input models use 50V capacitor.
For 48V input models use 100V capacitor.
