DESCRIPTION

The 53255 is a DC solid state relay (SSR) designed for high reliability commercial applications. This light weight device is resistant to damage from severe shock and vibration, and is immune to contact related problems inherent in electro-mechanical relays. The SSR is enclosed in a hermetic metal package to ensure reliability in harsh environments. Effective isolation of 1000 VDC between control and load circuits is achieved through the use of optical coupling.

Functionally, the device operates as a single-pole single-throw, normally open (1 Form A) DC solid-state relay. The SSR is actuated by an input current of 5 to 15 mA, which can be supplied from standard logic types such as open-collector TTL. Output is provided by a power MOSFET capable of carrying a continuous current of 10 amperes.

Notes:

1. Non-repetitive, pulse width $\leq 10\text{ms}$, $T_C = 25^\circ\text{C}$.
2. Non-repetitive, pulse width $\leq 100\mu\text{s}$, $T_C = 25^\circ\text{C}$.
3. Case Temperature $T_C = 25^\circ\text{C}$.
4. Input pins shorted together and output pins shorted together.
5. Input-output potential applied momentarily, not an operating condition.
6. Rise time is measured from 10% to 90% of load current (90% to 10% of V_O). Fall time is measured from 90% to 10% of load current (10% to 90% of V_O).

CAUTION:

Care should be taken so as not to exceed the maximum power dissipation and maximum junction temperature when repetitively switching loads.
