## Double Layer Capacitors

Form A

Fig. 1 Component outline

Form B

## FEATURES

- Polarized capacitor with high charge density, alternative product to rechargeable backup batteries

RoHS COMPLIANT

- Dielectric: electric double layer
- Radial leads, cylindrical case, insulated with a blue vinyl sleeve
- Available in both vertical and low-profile versions
- Unlimited charge and discharge cycle numbers
- No charge-discharge control circuitry and no series resistor necessary
- Maintenance-free, no periodic replacement or service necessary
- Ecologically beneficial (no Cd, no Li)
- Lead (Pb)-free versions are RoHS compliant

## APPLICATIONS

- Energy storage, for backup of semiconductor memories (CMOS) in all fields of electronics
- Telecommunication, audio-video, EDP
- General industrial, clock and timer systems

## MARKING

The capacitors are marked with the following information:

- Rated capacitance (in F)
- Rated voltage (in V)
- Date code, in accordance with IEC 60062
- Name of manufacturer
- Negative terminal identification
- Upper category temperature (at $85^{\circ} \mathrm{C}$ types only)

## MEASURING OF CHARACTERISTICS

## CAPACITANCE (C)

Capacitance shall be measured by constant current discharge method.

## DISCHARGE CURRENT AS A FUNCTION OF RATED CAPACITANCE

| PARAMETER | VALUE |  |  |  |  | UNIT |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rated capacitance, $\mathrm{C}_{\mathrm{R}}$ | 0.047 | 0.1 | 0.22 | 0.33 | 0.47 | 0.68 | 1.0 | F |
| Discharge current, $\mathrm{I}_{\mathrm{D}}$ | 0.1 |  |  |  |  |  |  | 1.0 |

Fig. 4 Voltage diagram for capacitance measurement

Capacitance value $\mathrm{C}_{\mathrm{R}}$ is given by discharge current $\mathrm{I}_{\mathrm{D}}$, time $T$ and rated voltage $U_{R}$, according to the following equation:
$C(F)=\frac{I_{D}(m A) \times 10^{-3} \times T(s)}{U_{R}(V)-2}$

Fig. 5 Test circuit for capacitance measurement

## INTERNAL RESISTANCE ( $\mathbf{R}_{\mathbf{I}}$ ) AT $1 \mathbf{k H z}$

$\mathrm{R}_{\mathrm{I}}(\Omega)=\frac{\mathrm{V}_{\mathrm{C}}(\mathrm{V})}{10^{-3}}$

## LEAKAGE CURRENT (IL)

Leakage current shall be measured after 30 minutes application of rated voltage $U_{R}$ :
$I_{L}(\mu \mathrm{~A})=\frac{\mathrm{V}(\mathrm{V})}{10^{-4}}$

Fig. 7 Test circuit for leakage current

Fig. 8 Typical leakage current as a function of time

Fig. 6 Test circuit for $\mathrm{R}_{1}$ measurement

Vishay BCcomponents Double Layer Capacitors

## DISCHARGE CHARACTERISTICS

Backup time of 196 DLC series capacitors depends on minimum memory holding voltage and discharge current (corresponding with the current consumption of the load).
For minimum backup times of standard and vertical miniaturized series see Figs 9 and 10 (charging time $\geq 24$ hours).

Fig. 9 Typical backup time as a function of discharge current

Fig. 10 Typical backup time as a function of discharge current

Figure 11 shows the backup time when a 196 DLC capacitor is discharged by a constant resistance (charging time $\geq 24$ hours).

The horizontal axis shows the initial value of discharge current if 5 V is connected to the capacitor via a fixed series resistor.

## EXAMPLE: $1 \mu \mathrm{~A}$ CORRESPONDS TO $5 \mathrm{M} \Omega$ AND $0.1 \mu \mathrm{~A}$ CORRESPONDS TO 50 M $\Omega$

The vertical axis shows that period of time during which the voltage drops from 5 to 2 V .

Fig. 11 Typical backup time as a function of initial discharge current

Table 2
TEST PROCEDURES AND REQUIREMENTS for standard and vertical miniaturized series ( $5.5 \mathrm{~V} ; 70^{\circ} \mathrm{C}$ )

| NAME OF TEST | IEC 60384-4/ <br> EN130300 <br> subclause | PROCEDURE <br> (quick reference) | REQUIREMENTS |
| :--- | :---: | :--- | :--- |
| Robustness of <br> terminations | 4.4 | tensile strength; application of loading force <br> for 10 seconds: <br> $20 ~$ <br> 5 (standard series) <br> 5 N (vertical miniaturized series) | no breaks |
| Resistance to <br> soldering heat | 4.5 | solder bath; $260^{\circ} \mathrm{C} ; 5$ seconds | $\Delta \mathrm{C} / \mathrm{C}: \pm 10 \%$ <br> $\mathrm{R}_{\mathrm{I}}$ and $\mathrm{I}_{\mathrm{L}} \leq$ spec. limit |
| Solderability | 4.6 | solder bath; $2355^{\circ} \mathrm{C} ; 2$ seconds | $\geq 75 \%$ tinning |
