## PERFORMANCE AND TEST METHOD

ltem		Performance	Testing method and conditions				
		CG, UJ	R	F	(In accordance with JIS C5101-1)		
Dissipation Factor		2.5% or less *1) 5% or less *1)		CG : 1MHz UJ, R, F : 1kHz Measurement voltage : 0.5~2Vrms			
Withstanding voltage		No insulation breakdown a	Application time is 1~5seconds. CG, UJ : 300% of rated voltage R, F : 250% of rated voltage				
Insulation resistance		No less than 10,000M $\Omega$ or 500M $\Omega$ • μ	Rated voltage is applied for 1 minute.				
Adhesion strength of termination		Chip 5N No peel recogni.	Solder a specimen on the testing jig shown on the left and apply a force of 5N (0.51kgf) in the direction indicated by arrow.				
	Visual	No remarkable dar					
Vibration resistance	Capacitance	Within specified tole	Vibration frequency: 10~55Hz Full amplitude: 1.5mm, 10~55~10Hz 1min. XYZ direction 2hrs for each total 6hrs.				
	Dissipation factor	Initial standard values mus					
	Visual	No remarkable dar		Solder : H60A or H63A (JIS Z 3282)			
Resistance to soldering heat	Capacitance	No more than ±2.5% or ±0.25pF, whichever is larger.	Within ±7.5%	Within ±20%	Soldering temperature : 270±5°C Immersion time : 10±1sec.		
	Dissipation factor	Initial standard values b	Preheat : 80~100°C (1~2min.) and 170~200°C (1~min.) Immersion into solder should be carried out continuously after preheating.				
	Insulation resistance	Initial standard values b					
	Withstanding voltage	No damage or insulation					
Solderability		Termination surface should be covered with new solder to over 75%.			Solder : H60A or H63 (JIS Z 3282A) Soldering temperature : 230±5°C Immersion time : 2±1sec.		
	Visual	No remarkable dar	Step Temperature Time				
	Capacitance	No more than ±2.5% or ±0.25pF, whichever is larger.	Within ±20%	1 Lower limit temp.* 30min.			
Temperature cycling	Dissipation factor	Initial standard values mus	2 Room temp. 3min. 3 Upper limit temp.* 30min. 4 Room temp. 3min.  These four temperatures in the above order completes one cycle.				
cycling	Insulation resistance	Initial standard values mus					
	Withstanding voltage	No damage or insulation breakdown.					
	Visual	No remarkable dar	The cycle is repeated 25 times.				
Humidity load test	Capacitance	No more than ±5% or ±0.5pF, whichever is larger.	Within ±12.5%	Within ±30%	1 resuing time . 1000 +40, -0		
	Dissipation factor	Less than 5% *	,	Less than 7.5% *1)			
	Insulation resistance	No less than 10,000MΩ or 500MΩ • μ	100% of rated voltage is applied				
Life test at high temperature load	Visual	No remarkable dar	Test temp : Upper limit temp.±3°C				
	Capacitance	No more than ±3% or ±0.3pF, whichever is larger	Within ±12.5%	Within ±30%	- Testing time : 1000 +48, -0		
	Dissipation factor	Less than 4% *1)   Less than 7.5% *1)			200% of rated voltage is applied.*2)		
	Insulation resistance	No less than 10,000M $\Omega$ or 500M $\Omega$ • $\mu$ F, whichever is smaller.			Add load at a speed of Unit : mm		
Flexion	Visual	No mechanical damage			about 1mm per second until flexion amount reaches 1mm and keep the condition R=230		
	Capacitance	No more than ±5% or ±0.5pF, whichever is larger.	Within ±12.5%	Within ±30%	for 5 minutes.  Have a capacitance meter connected to both ends of sample during a test.		

## \*1) Dielectric dissipation factor

Type name	Temperature characteristics	Rated voltage	Initial	Moistureproof load	High-temperature load
CNH20R224MM		16V	5% max.	7.5% max.	7% max.
CNH20R474M-□M					
CNH20R105M- M			9% max.	12.5% max.	12.5% max.
CNH20R475M-□M	R	6.3V			
CNH20R106MM					
CNH10R105M- M	1				

\*2) The following products are applied voltage 150%.

CNH20R224M-\_M CNH20R474M-\_M CNH20R105M-\_M The following product is applied rated voltage

CNH20R475M-\\_M CNH20R106M-\\_M CNH10R105M-\\_M
