
Features

- Current-controlled Output Current Source with 4 Input Channels
- Low-power Consumption
- Output Current up to 150 mA, Read Channel and Channel 2
- Output Current up to 200 mA, Channel 3 and Channel 4
- Total Output Current to 300 mA
- Rise Time 1.0 ns, Fall Time 1.1 ns
- On-chip RF Oscillator
- Control Frequency and Swings by Use of 2 External Resistors
- Oscillator Frequency Range from 200 MHz to 600 MHz
- Oscillator Swing to 100 mA
- Single 5V Power Supply
- Common Enable/Disable Input
- TTL/CMOS Control Signals
- Small SSO16 Package

Application

- DVD-RAM
- DVD-RW
- DVD+RW
- CD-RW
- Writable Optical Drives

1. Description

The T0820 is a laser diode driver for the operation of a grounded laser diode for writable optical drives. It includes four channels for four different optical power levels which are controlled by a separate IC. The read channel generates a continuous output level whereas channels 2 to 4 are provided as write channels with very fast switching speeds. Write current pulses are enabled when a "low" signal is applied to the NE pins. All channels are summed together at the IOOUT pin. Read channel and channel 2 can contribute up to 150 mA and channels 3 and 4 up to 200 mA to the total output current of up to 300 mA. A total gain of 100 is provided between each reference current input and the selected output. Although the reference inputs are current inputs voltage control is possible by using external resistors. Frequency and swing can be set by two external resistors. Oscillation is enabled by a "high" at the ENOSC pin. Complete output current and oscillator switch-off is achieved by a 'low' at the ENABLE input.

Pin	Symbol	Type	Function
1	IR	Analog	Input current, bias voltage approximately GND
2	I2	Analog	Input current, bias voltage approximately GND
3	RF	Analog	External resistor to GND sets oscillator frequency
4	I3	Analog	Input current, bias voltage approximately GND
5	I4	Analog	Input current, bias voltage approximately GND
6	NE2	Digital	Digital control of channel 2 (low active)
7	NE3	Digital	Digital control of channel 3 (low active)
8	NE4	Digital	Digital control of channel 4 (low active)
9	VCC2	Supply	+5V power supply for IOUT
10	ENOSC	Digital	Enables RF oscillator (high active)
11	ENABLE	Digital	Enables output current (high active)
12	RS	Analog	External resistor to GND sets oscillator swing
13	GND	Supply	Ground
14	IOUT	Analog	Output current source for laser diode
15	VCC2	Supply	+5V power supply for IOUT
16	VCC1	Supply	+5V power supply for circuit

3. Absolute Maximum Ratings

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
